

## CELLDATA DNASTORM™/RNAstorm™ 2.0 Combination Kit

### Product attributes

**Storage Conditions**

See individual components for storage temperature

A combination kit for dual extraction of DNA and RNA from a single FFPE sample, featuring proprietary CAT5™ technology.

### Product Description

Formalin-fixed tissue samples are a challenge for nucleic acid extraction, often resulting in low yields of amplifiable DNA/RNA and poor performance in subsequent steps involving enzymatic manipulation, including reverse transcription and sequencing library preparation. Powered by proprietary CAT5™ technology, the CELLDATA DNASTORM™/RNAstorm™ 2.0 Combination Kit enhances the removal of formaldehyde-induced damage and provides dual DNA and RNA extraction with higher yield and quality. This allows for improved amplifiability for applications such as RNA-seq, qPCR, microarray, or other gene expression analysis.

- Extract higher yields of DNA and RNA from a single FFPE tissue sample
- CAT5™ technology for chemical reversal of formaldehyde crosslinking
- Milder conditions and no harsh solvents
- Higher quality DNA/RNA with less fragmentation
- Better results in downstream analysis like PCR, microarray, or next-generation sequencing
- Simple spin column-based workflow

**Note:** This kit is a replacement for catalog number CD503. It uses a modified deparaffinization protocol with a new Dewaxing Solution (provided in the kit). The new kit retains the same proprietary CAT5™ catalytic technology for highly efficient reversal of formaldehyde crosslinks as the original kit.

For extracting either RNA or DNA from FFPE tissues, please see our [CELLDATA RNAstorm™ 2.0 FFPE RNA Extraction Kit \(CD506\)](#) and [CELLDATA DNASTORM™ 2.0 FFPE DNA Extraction Kit \(CD507\)](#). We also offer the [RNAstorm™ RNA Isolation Kit](#) for purifying RNA from fresh or frozen cells/tissue samples.
