Neurofilament-H Recombinant Monoclonal Mouse Antibody (rRmdO-20) – Biotium Choice

A recombinant mouse monoclonal antibody that recognizes a nonphosphorylated epitope in the tail domain of Neurofilament-H. The antibody belongs to the Biotium Choice list of select antibodies that have been validated in-house for optimal performance.

Product Description

Neurofilament-H Recombinant Monoclonal Mouse Antibody (rRmdO-20) is a recombinant mouse monoclonal antibody that recognizes a nonphosphorylated epitope in the tail domain of Neurofilament-H. Dephosphorylation of NF-H will increase immunoreactivity with this antibody. This antibody belongs to the Biotium Choice list of select antibodies that have been validated and optimized in-house for fluorescence microscopy. The antibody is available to a selection of CF® Dyes. They are supplied in PBS, 2 mg/mL rBSA, and 0.05% sodium azide.

- Available in 7 bright and photostable CF® Dyes, including near-IR CF®740
- Suitable for immunohistochemistry, immunofluorescence, and western

Neurofilaments, neuron-specific intermediate filament proteins, maintain neuronal caliber and consist mainly of NF-L, NF-M, and NF-H. Their expression is tissue- and development-specific. NF-H is crucial in mature axons and implicated in amyotrophic lateral sclerosis (ALS).
