CF® Dye Alkyne

CF® Dye alkynes react with azide groups via copper-catalyzed bioorthogonal cycloaddition. Can be used to fluorescently detect or label azide groups on target molecules. CF® Dye alkynes can also be used as building blocks to form fluorescent polymers.

Product attributes

Chemical reactivity (reacts with)	Azides/Picolyl azides
Functional group	Alkyne
Storage Conditions	Store at -10 to -35 °C, Protect from light

Product Description

CF® Dye alkynes can react with azide groups to form 1,2,3-triazole via 1,3-dipolar Huisgen copper-catalyzed cycloaddition. They can also be used as monomeric building blocks to copolymerize with other monomers to form fluorescent polymers.

- Fluorescent detection or labeling azide groups on target molecules.
- Can be used as fluorescent monomers to form dye-labeled polymers.
- Bright, photostable and water-soluble CF® Dyes are excellent options for fluorescent labeling.

Superior CF® Dyes
CF® Dyes are Biotium's line of next-generation fluorescent dyes that have improved brightness, photostability and water solubility compared to Alexa Fluor®, DyLight®, and other fluorescent dyes.

Learn more about CF® Dyes. For more information download the CF® Dye Brochure.

CF® Dye Alkyne

CF® Dye Alkyne	Ex/Em	Size	Catalog No.	Dye Features
CF®405M	408/452 nm	0.5 mg	92093	CF®405M Features
CF®488A	490/515 nm	0.5 mg	92086	CF®488A Features
CF®555	555/565 nm	0.5 mg	92087	CF®555 Features
CF®568	562/583 nm	0.5 mg	92088	CF®568 Features
CF®594	593/614 nm	0.5 mg	92089	CF®594 Features
CF®640R	642/662 nm	0.5 mg	92091	CF®640R Features
CF®647	650/665 nm	0.5 mg	92090	CF®647 Features
CF®660R	663/682 nm	0.5 mg	96004	CF®660R Features
CF®660C	667/685 nm	0.5 mg	92095	CF®660C Features
CF®680	681/698 nm	0.5 mg	96005	CF®680 Features
CF®680R	680/701 nm	0.5 mg	96006	CF®680R Features
