

## CF® Dye Picolyl Azide

CF® dye picolyl azide derivatives fluorescently label alkyne groups on biomolecules via the standard azide-alkyne cycloaddition, but at low copper concentrations.

### Product attributes

Chemical reactivity (reacts with)	Alkynes
Functional group	Picolyl azide
Storage Conditions	Store at -10 to -35 °C, Protect from light

## Product Description

CF® dye picolyl azide derivatives react with alkyne groups to form 1,2,3-triazole by 1,3-dipolar Huisgen cycloaddition. They offer benefits of the typical azide-alkyne cycloaddition but at a much lower copper (I) concentration without sacrificing reaction efficiency making it compatible with live cell labeling and copper-sensitive systems.

- Fluorescent detection or labeling of alkyne containing biomolecules in vitro or in vivo.
- Bioorthogonal azide-alkyne cycloaddition reaction at low copper (I) concentrations.
- Bright, photostable and water-soluble CF® dyes are excellent options for fluorescent labeling.

### Superior CF® Dyes

CF® dyes are Biotium's line of next-generation fluorescent dyes that have improved brightness, photostability and water solubility compared to Alexa Fluor®, DyLight®, and other fluorescent dyes.
