PathoGreen™ Histofluorescent Stain, 1000X in water

PathoGreen™ Histofluorescent Stain is an anionic green fluorescent dye functionally similar to Fluoro-Jade dyes. These dyes stain degenerating neurons and their processes after exposure to a variety of neurotoxic insults in brain sections and cultured neurons.

Product attributes

| | |
|----------------------------|---------------------------------|
| Apoptosis/viability marker | Dead cell stain |
| For live or fixed cells | For fixed cells/tissue sections |
| Detection method/readout | Fluorescence microscopy |
| Assay type/options | Endpoint assay |
| Colors | Green |
| Excitation/Emission | 497/520 nm |

Product Description

PathoGreen™ Histofluorescent Stain is an anionic green fluorescent dye (Ex/Em 497/520 nm) functionally similar to Fluoro-Jade® dyes. These dyes stain degenerating neurons and their processes after exposure to a variety of neurotoxic insults in brain sections and cultured neurons. The mechanism of neuronal staining by anionic fluorescent dyes has not been determined. It has been proposed that the negatively charged dyes bind to positively charged polyamines or other molecules specifically generated in dying neurons.

Fluoro-Jade is a registered trademark of Histo-Chem, Inc.
