Biocytin hydrazide

Biocytin hydrazide is an aldehyde-fixable cellular tracer that can be introduced into cells by microinjection. Biocytin hydrazide can also be used to label glycoproteins or other carbohydrate molecules (See Reactive Dyes for Labeling Glycoproteins and Other Carbohydrate Molecules).

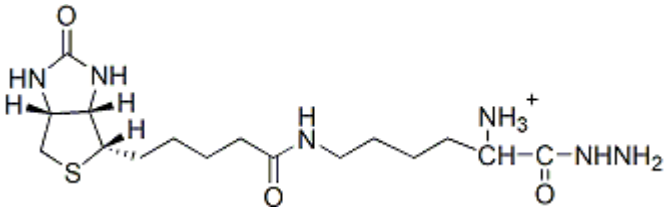

Product attributes

CAS number	102743-85-1

Product Description

Biocytin hydrazide is an aldehyde-fixable cellular tracer that can be introduced into cells by microinjection. Biocytin hydrazide can also be used to label glycoproteins or other carbohydrate molecules (See Reactive Dyes for Labeling Glycoproteins and Other Carbohydrate Molecules).

- White solid soluble in DMSO
- Store desiccated at 4 °C
- $C_{16}H_{30}N_6O_3S$
- MW: 386.51
- [102743-85-1]
